FINLAND

Short moves on site can also be accomplished easily by hand-pushing the TOPI Motorshovel on its wheels (only 99 pounds tongue weight).

VERSATILE.

TOPI Motorshovel special models are available for use with electricity or for use in existing basements and buildings or which include a hydraulic outlet (Max. outlet pressure available: 26 quarts per minute.)
One such favorite is the hydraulic hammer.

TOPI Motorshovel rotates 360° and its wide-stanced, low center of gravity makes it very stable for digging from every direction and able to transfer earth far from its source.

HARD WORKING.

TOPI Motorshovel loosens earth with 2,200 pounds of force and lifts 660 pounds up to 5 feet away from machine. The standard 16-inch bucket digs over a cubic foot with each bite.

QUICK TO BEGIN WORK.

Just unplug trailer lights and unhitch...slide tongue out... spread outrigger legs...start engine so boom can raise wheels off ground...snap the wheels from centered position (for driving) to rear, working position...TOPI Motorshovel is readied by one person in 1 to 2 minutes.

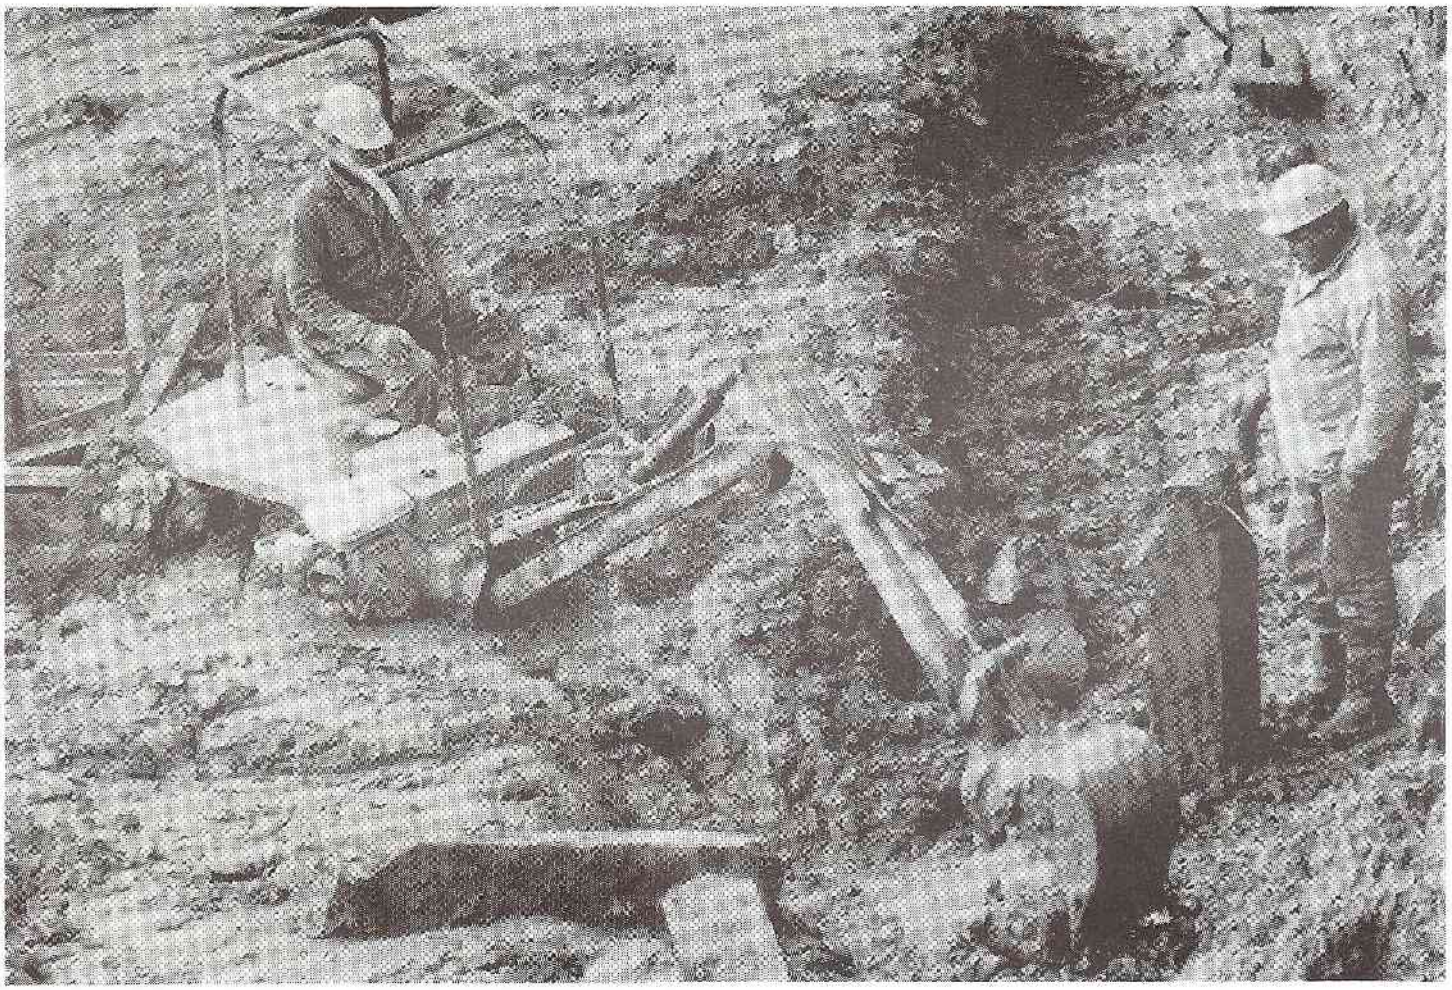
EASY ON YOU!

TOPI Motorshovel's adjustable, comfortable foam bucket seat welcomes you to your work-effortless work, you direct all day long, with just 2 close at hand "international standard" levers. New operators master TOPI in an hour or less.

EASILY TRANSPORTABLE.

TOPI Motorshovel is easily towed behind a car or truck. It even goes onto a pick-up truck, which it can mount unaided.

TOPI Motorshovel moves about during a job by raising its outriggers end via the boom and bucket and at the same time drawing the boom forward...or backward...and/or left or right.



U.S. SPECIFICATIONS and TECHNICAL DETAILS:

Weight: 1,210 pounds
Tongue weight: 99 pounds (approx.)
Power: four-cycle, industrial gasoline engine
Carriage rotation: 360°
Hoist capacity: 660 pounds from distance of 5 feet
Loosening capacity in bucket head: 2,200 pounds
Extension: 11 feet - 6 inches
Digging depht: 8 feet - 3 inches
Bucket width, standard: 16 inches
